

Parachute repacking is the same as described in regular manual, but this customized parachute **for 120 km/h** has special black slider ring which has to be folded according to picture below. Slider is folded on the top of lines, then is 150 mm of free lines and then the rest of lines can be folded and tied with 1x rubber band provided by Galaxy.

In case that the system is used on maximum weight/speed conditions, must be checked by Galaxy GRS.
