

GBS 10/350 Speedy for 220 km/h
SLIDER packing
12 JULY, 2017

Parachute repacking is the same as described in regular manual, but this customized parachute **for 220 km/h** has special fabric slider ring, which has to be folded according to picture below. Slider is folded on the top of lines, and then the rest of lines can be folded and tied with 1x rubber band provided by Galaxy.

Parachute has 14 lines, slider has 12 segments, so 2 slider holes contains 2 lines, the rest only one, as you can see from the picture. During folding keep those 2 slider holes one on top and one on bottom.

In case that the system is used on maximum weight/speed conditions, must be checked by Galaxy GRS.
